Job Description

JOB PURPOSE:

We are looking for a Programmer to help install/deploy, maintain, and troubleshoot our Linux and/or FOSS systems on our rapidly expanding client base. You will be part of a talented team that demonstrates superb technical competency, delivering mission critical infrastructure and ensuring the highest levels of availability, performance and security. Qualified systems administrators will have a background in IT, computer systems administration, or systems engineering and analysis.

KEY RESPONSIBILITIES:

- Understanding client requirements and how they translate to application features
- Collaborating with the team managers to set specifications for new applications
- Desiging creative prototypes according to specifications
- Writing high quality source code to complete applications within deadlines
- Performing rigorous unit and integration testing before launch
- Conducting functional and non-functional testing
- Troubleshooting and debugging applications
- Evaluating existing applications to reprogram, update and add new features
- Developing technical documents and handbooks to accurately represent application design and code

NOTE:

- Candidates are expected to be comfortable with office timing that usually ranges from 9:30 A.M. to 5:30 P.M.
- Freshers willing to learn & Females are are given due preference
