

Senior Javascript Developer

- **Vacancy for:** 1
- **Posted on:** Oct. 26, 2017
- **Deadline:** Nov. 28, 2017, 11:55 p.m.

You've been working with Javascript for a long time now, you've seen many problems, tackled a lot of them successfully, ideally, you've already written Javascript applications professionally. You're comfortable getting to know exactly you're writing code by speaking and working closely with the product manager and getting that real insight into the problem domain.

Once you've figured out what the product manager actually wants, the code you write will be of a level that makes you proud, you write tests first, you model your applications with extensibility in mind and understand that you're writing for humans, not computers.

Hopefully, you've spent some time on an Agile practice in the past and know how and why it works. Maybe you've spent time in a bad one and you're keen to see how it's meant to be done. If so, we can help.

We're looking for someone who is always learning and yearns to write professional JS code (not jquery) in one of the best software engineering companies in the country. We like to collaborate and support each other, so rock star personalities need not apply.

Bonus points if you've used Vue.js, ReactJS or even prefer writing awesome vanilla JS the right way.

TO APPLY:

Interested candidates are requested to send a CV and cover letter to jonathan+js@vayu.com.au that includes:

- Some information about what you've built recently and why you're proud of it
- Link to your GitHub/Bitbucket and/or some work you've done recently
- Details about why you want to work for us.
