Offered Salary : NRs. 35,000.00 - 50,000.00 Monthly

Job Specification

Education Level : Under Graduate (Bachelor)
Experience Required : More than or equal to 1 year

Job Description

We are looking for a Node.js Developer responsible for managing the interchange of data between the server and the users. Your primary focus will be the development of all server-side logic, definition and maintenance of the central database, and ensuring high performance and responsiveness to requests from the front-end. You will also be responsible for integrating the front-end elements built by your co-workers into the application. Therefore, a basic understanding of front-end technologies is necessary as well.

Responsibilities:

- Integration of user-facing elements developed by front-end developers with server side logic
- Writing reusable, testable, and efficient code
- Design and implementation of low-latency, high-availability, and performant applications
- Implementation of security and data protection
- Integration of data storage solutions like MongoDB, MySQL etc
- Work as part of team developing applications and services using Agile development methods
- Contribute to team and organizational improvements in process and infrastructure
- Integrate the user-facing elements developed by front-end developers
- Maintain the system after launch by making sure the system remains optimized and updated
- Contribute to all aspects of the software creation process
- Enthusiastically pursue additional training and understanding of new technologies that may be relevant to the Digital Platforms team. Advise management on strategies for use of new technologies.

Skills & Qualification:

- Previous working experience as a Node.js Developer for 1+ years
 - Strong proficiency with Javascript
 - In depth knowledge of NodeJS and ExpressJS
 - Understanding the nature of asynchronous programming and its quirks and workarounds
 - Good understanding of server-side templating languages
 - User authentication and authorization between multiple systems, servers and environments
 - Integration of multiple data sources and databases into one system
 - Proficient understanding of code versioning tools, such as Git
 - Must possess excellent analytical and troubleshooting skills which will be used to diagnose, debug and solve issues in current production platforms
-
