Experience Required : Not Required

Job Description

- Own the team's engineering process to achieve best productivity and correlate with other teams across organization
- Participate in the cross-team meetings to drive actionable work items to successful completion
- Coach and mentor less experienced team members
- Analyze and break down business requirements to select most optimal designs for product feature implementation; both independently and in cooperation with the Architecture team
- Investigate technical issues, remove blockers and distribute development tasks among the team members

Skill Requirements:

- Result oriented and focused on successful delivery
- Excellent communicator with both technical and non-technical subjects
- Demonstrates strong sense of ownership, enthusiasm for technology and initiative
- Natural team player and leader promoting the team members and helping their professional growth
- Able to deliver in the fast-paced and growing team environment
- Strong knowledge of OOA, OOD principles and multi-threading
- Knowledge of Agile/Scrum
- Industrial experience with Agile development methodologies, Scrum, Kanban
- Experience with common patterns in distributed systems, e.g. REST, SOA, Web APIs
- Experience with cloud-based services (Amazon AWS and Azure) is a plus
- Strong verbal and written english

Qualification and Experience:

- Bachelor or Master's degree in Computer Science/ Computer engineering
- 7+ years of experience in the design and development of distributed systems, preferably with Microsoft .Net/PHP Framework
